

# Inverse of a Matrix

$A \in \mathbb{R}^{n \times n}$  is invertible if there is a  $C \in \mathbb{R}^{n \times n}$  so that:

$$AC = CA = I_n$$

If so we write,  $C = A^{-1}$

---

$A$  has an inverse if and only if there is a pivot on every row and column.

## For a $2 \times 2$

### Compute

$$\begin{bmatrix} a & b \\ c & d \end{bmatrix}^{-1} = \frac{1}{ad - bc} \begin{bmatrix} d & -b \\ -c & a \end{bmatrix}$$

### Use it to solve a Linear systems

$$\begin{aligned} A\vec{x} &= b \\ A^{-1}A\vec{x} &= A^{-1}b \\ I\vec{x} &= A^{-1}b \\ \vec{x} &= A^{-1}b \end{aligned}$$

## Computing $A^{-1}$

1. Row reduce the augmented matrix  $(A \mid I_n)$  to [RREF](#)
2. If the reduction is in the form,  $(I_n \mid B)$  then  $A$  is invertible and  $B = A^{-1}$ . Else,  $A$  is not invertible.

For example to find  $\begin{bmatrix} 0 & 1 & 2 \\ 1 & 0 & 3 \\ 0 & 0 & 1 \end{bmatrix}^{-1}$  :

$$\begin{aligned}
&= \left[ \begin{array}{ccc|ccc} 0 & 1 & 2 & 1 & 0 & 0 \\ 1 & 0 & 3 & 0 & 1 & 0 \\ 0 & 0 & 1 & 0 & 0 & 1 \end{array} \right] \\
&= \left[ \begin{array}{ccc|ccc} 1 & 0 & 0 & 0 & 1 & -3 \\ 0 & 1 & 0 & 1 & 0 & -2 \\ 0 & 0 & 1 & 0 & 0 & 1 \end{array} \right] \\
&= (I_3 \mid A^{-1}) \\
A^{-1} &= \begin{bmatrix} 0 & 1 & -3 \\ 1 & 0 & -2 \\ 0 & 0 & 1 \end{bmatrix}
\end{aligned}$$
